

SOLE-SOURCE YOUR PAPER AND SOAP PRODUCTS FOR CONSISTENCY, AND DON'T SACRIFICE QUALITY TO SAVE A FEW PENNIES.

The money you save up-front may disappear on the back-end as your maintenance and cleaning staff try to force-fit products into incompatible dispensers; clean up drippy, gloppy soap; or sweep up the mess created by hand towels that tab, tear and don't dispense properly.

A coordinated family of dispensers usually means cleaning staff only has to carry one key to open and refill the dispensers, for extra time-savings.

Your *Quick-Maintenance* Checklist

High-capacity roll towel system
High-capacity bath tissue system that dispenses individual sheets
Coreless bath tissue system
Jumbo roll bath tissue system
Disposable, self-contained soap systems
High-quality concentrated soap
Roll towels

Quick Tips

In restroom maintenance, one way to cut costs and increase profits is to reduce maintenance time by purchasing efficient restroom products that eliminate waste and clutter. To make your restroom a quick maintenance restroom, consider the following.

TAKE ADVANTAGE OF TIME-SAVING INNOVATIONS.

KIMBERLY-CLARK® Professional made headlines when it “filled the hole in the roll” with its new **coreless bath tissue**. With greater capacity on a roll and less frequent run-outs, coreless tissue lasts longer.

Coreless tissue retrofits easily into existing dispensers. A simple adapter holds the roll in place. No tools or spindles are required.

One of Kimberly-Clark’s newest innovations is the **ALL-N-1 Skincare System**, a disposable, self-contained system that includes the dispenser and soap in one unit. As soap is depleted, maintenance simply discards the recyclable unit and installs a new one.

The ALL-N-1 System installs onto an easy-to-mount bracket. The system provides easy and reliable dispensing. A see-through window helps maintenance staff quickly see when it’s time to change the unit. This minimizes soap waste, improves cost-in-use and reduces labor.

INSTALL HIGH-CAPACITY SYSTEMS TO REDUCE CHANGE-OUTS.

High-capacity roll towel systems can reduce the dispensing waste and litter problems of folded towels.

The longer-lasting **SCOTT® 1000' Hard Roll Towel** offers 25% more feet than our standard 800' roll towels, and fits in your current dispenser.

The **JRT® Jumbo Roll Tissue System** has become the standard for high-capacity bath tissue. By holding the equivalent of up to 10 rolls of standard bath tissue, the Jumbo Roll System lets maintenance pros spend less time refilling dispensers.

CONTROL DISPENSING TO ELIMINATE WASTE.

Towel and tissue litter on the floor means wasted product, more time spent cleaning up the mess and more frequent refills.

To avoid these budget-, time-, and image-zapping problems, control dispensing with the **Hygienic Bath Tissue System** from KIMBERLY-CLARK® Professional. KLEENEX® Hygienic Bath Tissue provides high-quality tissue sheets in an attractive high-capacity dispenser, which holds the equivalent of 5 standard bath tissue rolls. The system reduces usage through controlled dispensing and cuts waste by eliminating stub rolls.

For folded hand towels, the best way to control dispensing is with the **KLEENEX® SCOTTFOLD Towel System**. This patented system is designed for one-at-a-time dispensing, enhancing the cleanliness of your washroom while controlling costs by reducing maintenance and waste.

LOOK FOR DURABLE, VANDAL-RESISTANT FIXTURES.

You can stop vandals and eliminate the extra maintenance by choosing your restroom fixtures wisely.

Tough, durable materials make the difference. For example, **D-2 Dispensers** from KIMBERLY-CLARK® Professional are designed to withstand the rigors of high-traffic areas. Their contoured design, double-thick wall construction, ribbed reinforcement and plastic construction help them withstand greater impact, force and dents.

Smoked transparent doors enable quick assessment of refill needs. Curved sides make it difficult to grab or pull the unit off the wall.

TRY NO-TOUCH SYSTEMS... THERE'S LESS TO BREAK.

With no-touch faucets, automatic flushing devices and hands-free dispensers for bath tissue, soap and towels, there are fewer things to break, become jammed or create other maintenance problems.

KIMBERLY-CLARK® Professional offers several “no-touch” dispensers, including the **SANITOUCH No-Touch Soap Dispenser**, which uses an infra-red sensor to deliver a metered portion of soap and the **SANITOUCH® Roll Towel Dispenser** and **SANITOUCH® Hygienic Bath Tissue Dispenser**, which allows users to only touch the sheets they use.
